Forest Products
Industry**

Overview

The **Scale House System** provides you with an easy and accurate way to manage your weighing operations. The system interfaces with **Forest Products Accounting** either in an on-line or host/remote environment. The user defines which fields are to be required during the weighing process.

The system provides for multiple gates and multiple scale operators. Manual input of the state and county is allowed for gate wood tracts where severance tax reporting is required. The system automatically accesses the state and county code in the tract file on all other tracts.

Completed tickets are easily accessed for the input of a stick scale volume in situations where the load is both weighed and stick scaled. Culls can be Entered during or after the weighing process.

Shipment tickets are loads that originate from either an inventory, or non-Inventory source within the company. The gross weight on a shipment ticket is captured from the scale indicator and scale operator enters an estimated tare as the load leaves the yard. The Shipment Ticket is printed and displays on the "On Yard" window until the destination's ticket number, gross, and tare weights are entered. The shipment ticket number is displayed in the accounts receivable file with destination's ticket number followed by your company's scale ticket number for easy tracking.

Features

- Advanced full-featured Scale House System
- Password Security
- Provides for extensive on-line validation of data
- Prints scale tickets on pre-printed forms or blank paper
- User-defined ticket format
- Provides for optional scale ticket comment of eighteen lines with seventy characters per line
- Provides for multiple gates and scale operators
- Provides for the entry of stick scale & cull volumes
- Host/remote utility allows you to operate remote scale houses independently of the network server.
- Interfaces to all digital scale indicators
- Provides for field to record security markings on company owned loads

Scale House Reports

- Scale Ticket Listing—Condensed
- Gate Setup Information
- Scale Ticket Transaction Listing
- Scale Ticket Transaction Summary
- Truck Turn Around Report
- Scale Ticket Comments

SCALE HOUSE

Scale House—Gate Setup

The Gate Setup General Information window contains the parameters that controls what information is displayed and required during the weighing process.

The Scale Indicator information is defined on the 2nd and 3rd tabs.

The system allows the user to enter the routing distribution description for each copy of the scale ticket.

The system allows you to print a maximum of four copies of the scale ticket.

Scale House—Scale-Out Window

Basic Steps in the Weighing Process

- Scale-In
- Scale-Out
- Print Scale Ticket
- Post Scale Tickets
- Print Reports

The scale ticket allows for a fifteen-character reference field.

The truck description can be to thirty character in length.

The scale ticket provides for a seventy-two character comment field.

To weigh the truck out, click on the “Weigh-Out” button, or press the “Enter” key when the
